

True Value Distribution Center

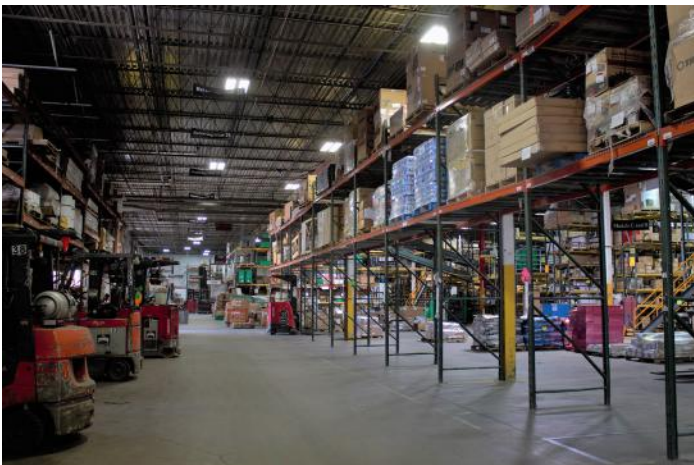

- Annual Energy Savings: 592,913 kWh
- 33% of project cost covered by rebate
- 60% energy reduction on lighting
- Under 3-year ROI

CHALLENGE

Prior to the retrofit, the True Value Distribution Center was outfitted with fluorescent high bays, mounted in a way that prevented effective lighting of the warehouse. Fixtures were also damaged by forklifts. Poor light levels and deferred maintenance resulted in decreased process flow of the facility.

SOLUTION

LED Supply Co upgraded the fluorescent high bays to LEDs, drastically increasing the light levels in the warehouse and aisles. The improvements increased process flow and reduced maintenance. Occupancy sensors reduced energy consumption. Our team completed the retrofits in one month.
